Paw Paw Lake has been scheduled for the week of:

Date	Description	Date	Description
5/1/2017	Sonar Treatment	7/31/2017	Evaluation
5/15/2017	Sonar Bump Treatment	9/4/2017	AVAS Survey
6/26/2017	Evaluation		

DEQ permitting restrictions, national holidays, and/or weather conditions may influence the timing of treatments throughout the 2017 season. PLM treats each lake according to a schedule or season plan, established with the cooperation of your lake association, lake board or residents on the lake. The treatment schedule is approximate. Please watch your shoreline for the posting of the 8.5x11 inch, yellow or green signs. The signs will indicate the date of the treatment, the products used, and any restrictions on the use of treated water for swimming, watering lawns, etc. The property owners in this area are planning to have the waters chemically treated to control lake weeds and/or algae. This notice is being circulated in accordance with Department of Environmental Quality (DEQ) procedures. Below is a list of herbicides that may be applied to the lake and the associated use restrictions. On the day of treatment, signs will be posted along the shoreline within 100 feet of treatment areas that indicate what products were used and specific water use restrictions that apply:

Site-Specific recommendations to limit ornamental irrigation with Renovate & Sculpin granular treated water will typically last 2-14 days. Contact PLM for further information.

The chemicals used for Aquatic Nuisance Control are registered by the U.S. Environmental Protection Agency and the Michigan Department of Agriculture. The potential for damage to fish and other non-target organisms is minimal provided that the product is used as directed on the product label and the permit. To minimize the possible effects on health and the environment, the treated water is restricted for the above purposes.

Your association must forward this to all riparians! Tentative treatment dates and notice of products to be applied must given to all riparians not more than 45 days before and at least seven days prior to the initial treatment.

Dear Paw Paw Lake Resident,

In 2017, we will be performing the same type of treatment that was done in 2012 using the aquatic herbicide Sonar A.S. This is a unique type of treatment typically reserved for situations where the exotic plant species Eurasian watermilfoil reaches high levels and a lake-wide distribution. The 2012 treatment was very effective in regards to "resetting" milfoil to low levels and we expect the same results this year. Unlike conventional/spot treatments conducted in 2013-2016, this Sonar treatment is a whole lake application. It does have some longer restriction times in regards to irrigation but PLM will be monitoring the concentrations during the treatment process and will be updating our website to let you know if restrictions are still in effect. We are basically treating with a very low dose of 6 parts per billion (ppb). When levels drop below 5 ppb, the restriction is no longer applicable. If you have any questions or concerns, please feel free to contact our office.
